Mohamed Aashik I

aashik.i2005@gmail.com | +919500570711 | LinkedIn | Github | Chennai, Tamil Nadu

EDUCATION

MOHAMED SATHAK ENGG. COLLEGE B.Tech Computer Science and Business Systems
Kilakarai, Tamil Nadu
Aug 2022 – May 2026
CGPA: **8.08 / 10**

SCHWARTZ MATRIC. HR. SEC. SCHOOL HSC – 2022 | **67%**
SSLC – 2022 | **76%**
Ramanathapuram, Tamil Nadu

SKILLS

LANGUAGES
C# | SQL (T-SQL) | JavaScript | Python

.NETSTACK
C#, ASP.NET Core Web API, Entity Framework Core, dependency injection, LINQ, and asynchronous programming.

FRONTEND
ReactJS, JavaScript, API integration, responsive UI.

DATABASES
MS SQL Server, MongoDB, T-SQL, relational database design, indexing, and transactions.

WEB & API
RESTful APIs, JWT Authentication, Node.js, Express.js, React.js, HTML5, CSS3

AI INTEGRATION
Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), semantic retrieval, Gemini API.

TOOLS
Visual Studio, VS Code, Git, GitHub, Postman, Vercel, and Render

FUNDAMENTALS
Data Structures & Algorithms, OOP, DBMS, and SDLC

CERTIFICATIONS

Cloud Computing (Elite)
NPTEL, **IIT Kharagpur**
Jan – Apr 2025 | **Score: 70%**

Publications

Agri Smart | IJEDR, Vol. 14, Issue 2, May 2026

- Co-authored research integrating computer vision, machine learning, **XGBoost**, and **satellite-based NDVI** for intelligent crop recommendations and health monitoring.
- Contributed to research on **computer vision**-based soil nutrient estimation and XGBoost-driven crop recommendation.

Publication ID: **IJEDR26A2077** | **ISSN: 2321-9939**

SUMMARY

Entry-level .NET Full-Stack Developer with hands-on project experience in C#, ASP.NET Core Web API, Entity Framework Core, and MS SQL Server. Skilled in building RESTful APIs, implementing JWT authentication and role-based authorization, and integrating React.js frontends with backend services. Exploring AI-powered applications using RAG, MCP, and the Gemini API.

PROJECTS

EMPLOYEE LEAVE MANAGEMENT SYSTEM

On Progress

- Developed 4 RESTful API endpoints using ASP.NET Core Web API, Entity Framework Core, code-first migrations, and a normalized SQL Server database.
- Implementing JWT authentication, role-based authorization for 3 roles (Admin, Manager, and Employee), and server-side validation; built LINQ queries with pagination and dynamic filtering.
- Building a responsive React.js dashboard integrated with backend APIs for leave applications, approval workflows, and leave status tracking.
- Tech stack: **ASP.NET Core Web API, MS SQL Server, React.js, JWT**

DOCUMIND – RAG DOCUMENT Q&A WITH AN MCP SERVER

On Progress

- Developing a full-stack document intelligence platform using ASP.NET Core Web API, React.js, and EF Core for secure document management and relational data persistence.
- Implementing a RAG pipeline with PDF text extraction, chunking, embeddings, and semantic retrieval to generate source-grounded answers with document and page citations.
- Building a C# MCP server exposing document search and retrieval tools, with JWT authentication, user-scoped access, input validation, and automated tests for authorization and retrieval accuracy.
- Tech Stack: **ASP.NET Core Web API**, Entity Framework Core, **SQL Server**, **React.js**, Gemini API, **Vector Search**, MCP, JWT

QR ATTENDANCE MANAGEMENT SYSTEM

August 2026 – October 2026

- Developed a full-stack attendance management system using React.js, Node.js, Express.js, and MS SQL Server, enabling QR code-based student check-in/check-out across multiple classes.
- Implemented server-side QR validation, duplicate check-in prevention, and JWT authentication with role-based access control for Trainer and Student roles.
- Integrated MS SQL Server to manage student records, class details, and attendance transactions with reliable data persistence.
- Tech stack: **React.js**, **Node.js**, **Express.js**, **MS SQL Server**, **JWT**

AgriSmart—AI-Powered Smart Farming Assistant

January 2026 - May 2026

- Built an Android smart farming application using Kotlin and Jetpack Compose, integrating Supabase authentication, Room database storage, and external APIs for weather, market prices, and satellite NDVI monitoring.
- Implemented on-device soil image analysis using OpenCV and CameraX to estimate nitrogen, phosphorus, and potassium (NPK) levels.
- Deployed an XGBoost model through ONNX Runtime to deliver offline crop recommendations based on soil and environmental data.
- Tech stack: **Kotlin**, Jetpack Compose, **OpenCV**, **ONNX Runtime**, **XGBoost**, Supabase
